10 Megabaud Versatile Link Fiber Optic Transmitter  
and Receiver for 1 mm POF and 200  $\mu\text{m}$  HCS<sup>®</sup>

## Data Sheet

### Description

The HFBR-0508Z Series consists of a fiber-optic transmitter and receiver operating at a 650 nm wavelength (red). The HFBR-1528Z transmitter is an LED in a low cost plastic housing designed to efficiently couple power into 200  $\mu\text{m}$  diameter Hard Clad Silica (HCS<sup>®</sup>) and 1 mm diameter Plastic optical fiber (POF). The HFBR-2528Z receiver incorporates a PIN detector and digital output IC compatible with CMOS and TTL logic families.

HFBR-0508Z links operate from DC to 10 MBd at distances up to 50 meters with 1 mm POF and up to 500 meters with 200  $\mu\text{m}$  HCS<sup>®</sup>. No minimum link distances are required when using recommended circuits, simplifying design.

Versatile Link components can be interlocked (N-plexed together) to minimize space and to provide dual connections with the duplex connectors. Up to eight packages can be interlocked and inserted into a printed circuit board.

POF and HCS<sup>®</sup> are available in pre-connected lengths or can be easily field-terminated. A single transmitter drive current for POF and HCS<sup>®</sup> allows both fibers to be used with a single design.

- Optical power measured at the end of 0.5 meters of 1 mm diameter plastic or 200  $\mu\text{m}$  diameter hard clad silica fiber with a large area detector.
- Minimum and maximum values for  $P_T$  over temperature are based on a fixed drive current. The recommended drive circuit has temperature compensation which reduces the variation in  $P_T$  over temperature; refer to Figures 4 and 6.
- Typical value measured from junction to PC board solder joint for horizontal mount package, HFBR-1528Z.
- Pins 5 and 8 are for mounting and retaining purposes, but are electrically connected; pins 3 and 4 are electrically isolated. It is recommended that pins 3, 4, 5 and 8 all be connected to ground to reduce coupling of electrical noise.
- Refer to the "Plastic Optical Fiber and HCS Fiber Cable and Connectors for Versatile Link" Technical Data Sheet for cable connector options for 1 mm plastic and 200  $\mu\text{m}$  HCS optical fiber.

## HFBR-2528Z Receiver

The HFBR-2528Z receiver consists of a silicon PIN photodiode and digitizing IC to produce a logic compatible output. The IC includes a unique circuit to correct the pulse width distortion (PWD) of the first bit after a long idle period. This enables operation from DC to 10 MBd with low PWD for arbitrary data patterns.

The receiver output is a “push-pull” stage compatible with TTL and CMOS logic. The receiver housing is a dark, conductive plastic, compatible with all Versatile Link connectors.

### Notes:

- Typical data are at  $+25^\circ\text{C}$ ,  $V_{CC} = 5.0\text{ V}$ .
- Input power levels are for peak (not average) optical input levels. For 50% duty cycle data, peak optical power is twice the average optical power.
- Receiver overdrive ( $P_{RL,max}$ ) is specified as the limit where  $|PWD|$  will not exceed 30 ns. The receiver will be in the correct state (logic “0”) for optical powers above  $P_{RL,max}$ . However, it may not meet a 30% symbol period PWD if the overdrive limit is exceeded. Refer to Figure 8 for PWD performance at high received optical powers.
- Typical value measured from junction to PC board solder joint for horizontal mount package, HFBR-2528Z.
- Pins 5 and 8 are electrically connected to the conductive housing and are also used for mounting and retaining purposes. It is required that pins 5 and 8 be connected to ground to maintain conductive housing shield effectiveness.
- In recommended receiver circuit, with an optical signal from the recommended transmitter circuit.
- Pin 4 is electrically isolated internally. Pin 4 may be externally connected to pin 1 for board layout compatibility with HFBR-25X1Z, HFBR-25X2Z and HFBR-25X4Z. Otherwise it is recommended pin 4 be grounded as in Figure 11.
- $BER \leq 10E-9$ , includes a 10.8 dB margin below the receiver switching threshold level (signal to noise ratio = 12).
